

SiteChase

ILLUSTRATIVE REPORT

Local Visibility Review

A fictional example of how SiteChase turns crawl, local, content, conversion, and AI-readiness signals into a prioritized approval queue.

Illustrative SiteChase sample. This report uses fictional data. It is not a client case study, ranking promise, or forecast of results.

Executive summary

This illustrative review identified twelve signals worth evaluating. Three are high priority, five are medium-priority opportunities, and four are monitoring items. The report separates observation, inference, recommendation, approval, and verification.

3

high-priority review items

5

medium opportunities

4

monitoring items

Illustrative priority queue

Priority	Signal	Evidence	Proposed action
High	Service page difficult to discover	3 inlinks; depth 4	Add relevant contextual links
High	Generic page title	Rendered title and service map	Draft a clearer title
High	Mobile CTA unclear	Mobile review	Improve CTA prominence
Medium	Visible facts and schema differ	Page/schema comparison	Align schema to approved visible facts
Monitor	Suspicious backlink pattern	Backlink research	Investigate before considering action

No ranking guarantees. Recommendations require evidence and the appropriate approval.

Illustrative before and after

Before

- 3 internal inlinks
- Crawl depth 4
- Generic title
- Mobile CTA difficult to find

Approved work

- Add relevant links
- Improve title
- Clarify mobile CTA
- Snapshot and verify

Verified after

- 7 internal inlinks
- Crawl depth 2
- Title renders
- CTA works on mobile

Not claimed: a guaranteed ranking, traffic, revenue, call, booking, or patient-inquiry increase.

Review workflow

1 • Collect

Professional SEO and local-search signals.

2 • Validate

Reproduce issues and remove false positives.

3 • Challenge

Compare actions and test assumptions.

4 • Review

Human evidence and risk check.

5 • Approve

Explain scope and limitations.

6 • Verify

Implement, inspect, and document.
